Baltic Beach Public**

From the following statements about the information needs for farmers when working with digital tools.

0 5 5

Please select the THREE with which you MOST AGREE:

Positioning the farmer as a partner in ideation and development of digital tools and this will be critical for accelerating digital technology adoption in the farming community

Lack of integration of different tools; need of an organized and structured overview of in-use digital tools across Europe

Opportunities to see how digital tools work in practice, e.g. on experimental farms

Access to training on digital skills and coaching

Farmers need to trust their data providers that the data is stored properly and their ownership is guaranteed.
